Institute of Air and Space Law

- Konert & Kasprzyk: Research Project „Unmanned aircraft, New Era in Aviation Law” at Łazarski University in Warsaw, financed by National Centre of Science in Poland (no 2017/27/B/HS5/00008 (2018-2021)
 - <https://prawodrony.pl/>
 - 18 publications (three books and articles)
- Drone Strategy 2.0 (DG Move Research Project) (2021 - ...)

General results of the study

The primary result of the research was the determination of the legal qualification of drones. Drone is an aircraft? Drone is a robot?

Drones - as a new technology.

Strong integration of public law with private law - the possibility of using public law regulations regulating issues related to the use of drones, including security issues, to determine the scope of liability of entities for damage caused during drone operations.

Postulates in private law

It is reasonable to regulate the issue of civil liability for damages caused by autonomous unmanned aerial vehicles, taking into account safety, especially by preventing collisions and protecting people and property on the ground;

It is proposed to adapt the existing provisions on liability for defective products to the changing world as a result of the fourth technological revolution, especially based on case studies;

Postulates in
private law

In the case of the U-space concept, it is necessary to depart from the traditional regime of civil liability, advocating an approach assuming risk management, which is based on the so-called channeling the obligation to pay compensation to one entity, which can minimize the risk and take action in relation to the negative effects, and generate financial benefits from a given activity.
